

Collection 2021
#wake #surf

Goodboards was founded in 2010. Our headquarters can be found at the very beautiful Ammersee, between Munich and the alps. We are an owner guided and managed board-specialist. Not a mainstream investor-controlled company. Our collection consists of snowboards, wakeboards, kiteboards and we are currently in the development stage of robust surfboards.

Our slogan - JOIN THE GOOD WAY - best describes our company's philosophy and embracing the amazing sense of life that surrounds the region.

In the development stage we combine our ideas with the wishes and perceptions from our team riders, retailers and most of all our committed customers. By using only the best in high-graded material, our board have an exceptional life expectancy as well as offering a great deal in performance and fun. Our premium products are hand crafted with the smallest details kept close to heart and brought to market through our owner-operated distributors. We prefer timeless designs, for which we have received 6 design awards. 180 days a year we are on tour providing our customers and hopeful customers with test rides. Through this means we are able to not only let them test the boards and advice them on our current and future board technology, but also gather feedback directly from them to help with future development.

Riding with our customers also helps us engage more with them and allows for a more healthier and social growth.

Advantages for cables and customers:

- sintered slider base, ABS sidewalls, quadraxial fiberglass and wood-aircloud-core ensure a durable construction
- high volume aircloud in wood core give the boards more volume, which is very important for a successful start
- due to the flat construction the center of gravity is lower and the ride is more stable
- ABS sidewall ensures an optimal edge in the water and easy passage while carving
- start up guarantees fast learning and more fun

This INSANE board is a great new addition to our collection. Designed especially for air tricks and features. The somewhat smaller outline supplies the board with unbelievable manoeuvrability. With the help of a stiffened core and a completely new channel system your inverts are going to become a lot more controlled and therefore higher. Because of this core and channel combo it is also going to make those landings feel as though you were landing on a cloud. We have however not forgotten about those beloved features. With a softer tip and tail those nose and tail presses are as easy falling on your ass.

The Wipe is a playful park-junky in sizes: 138, 142, 146, 150 and 154cm. The robust construction with a thick base, a double-wood-core and strong ABS sidewalls means the board can take a beating and a long life expectancy. The wider shape allows for greater buoyancy and therefore guaranteed stability in those landings. The base is straight up flat, smooth and fast. The flex comes from the middle and gets softer towards the nose and tail giving the board a pure jibber feel.

piece			

The anti-chop technology makes the SNAKE a particularly comfort-oriented kiteboard. The wavy sidecut easily cuts through troubled water, making it noticeably gentle on the knee and the joints. This unusual shape extends the effective edge, the smoothness is increased, while the SNAKE turns easier and generates less water. With the highest quality materials and a sophisticated construction, all kiteboards from our collection are very durable and powerful.

size	136/41,4	140/42,6
piece		

Amnesia Pro is the newest offspring in our kiteboard series. It was further developed on the basis of our previous bestseller "Amnesia", that is to say around the edge of the wave like our previous year's Snake model. The board is intended for riders looking for the performance of a freestyle board and the comfort of a freerider. It's an incredibly versatile board. Tip and tail are reinforced with carbon. In combination with the tube channels and sophisticated underwater hull with long lateral channels, the board provides you with excellent grip for jumps and stability on hard landings. The wave-shaped outline extends the effective edge and cuts through choppy water with ease, making it incredibly smooth and easy to turn.
